SG11 Dear

Enclosed is a subjective report of one of our more articulate subjects who worked on the four-state random stimulus generator. Over several thousand trials he scored well enough that the probability of obtaining his result by chance was less than 1 part in  $10^6$ .

SG11

Perhaps   <sup>too</sup> would like to look it over. I recall

SG11

saying that any subjective reports would be useful to have.

SG11

we are anxiously awaiting our medical and psychological data that has been obtained on some of our subjects. We even went ahead and did the brain X-ray scan - - the doctor said that the amount of X-rays involved was less than that due to cosmic rays in a single day, so I decided to go ahead.

Based on my conversations with  I realize that a ton of data here is of no use to you, so I am stopping experimentation and analyzing our data to send to you. It is certainly a monumental job - a single session of physiological correlates takes several days to milk the data out, and we have literally over a dozen sessions of this type. I am on a strict schedule of 8 AM to 2AM to get this data to you before I go to Europe and my wedding. See you soon.

SG11

with best regards,

SG11
