

~~W/~~

8610 - Session # 4  
(cont.)

One project might involve an individual in the building monitoring or coordinating the activities of persons who are located outside the facility; who record, analyze, develop activities relating to "hard science / technological things" and the associated idea of "finding things out."

The structure itself is "technically" oriented involving technical equipment, but this interest extends into greater socio-economic spheres external to structure. "Makes connections anywhere it can." This agency "takes action" rather than produces an end product (whether tangible or informational).

1 year from now, effort still continues, but is scaled back - as if part of resources has moved to another place to form a sister agency facility.

mission

Structure is "technical" - contains technical equipment, but interest in "technical" extends into socio-economic sphere external to structure. Makes ambitious arguments it can.

Takes autom-logic "produce" as primary function.

Can cooperate/resist ~~at~~ non-organic elements if necessary

As US  
reminds  
me of tech  
SUCS people

S4/2 reminds me strongly of tech services people who go provide support to agencies who have discovered a "bug" or need electronic OPSEC sppt they can't handle themselves

1 yr from now, effort still continues but less intense - as it part of element has been moved to another place as core to form sister facility.

5 1/2 Closed room. Room is fairly comfortably appointed. Don't pay attention to surroundings. They have equipment they monitor. May wear headphones.

## Summary

People w/in structure walk around, sit, wear greyish clothing, have short hair, are predominantly males, operate equipment, often work individually but consult w/ each other; work at console. Facility has an ~~open~~ ongoing mission involving diverse projects + operations, people are serious, relatively humorless, dedicated + believe in what they're doing.

A project might involve an individual in the bldg monitoring or coordinating the activity of person(s) exterior to facility. Exterior people record, analyze, develop; activities are related to "hands-on"/technological things, + the idea of "finishing things out."

Structure itself is "technically" oriented, involving technical equipment, but interests in "technical" extend into greater solid-economic sphere exterior to structure. Makes connection any where it can. Agency "takes action" rather than produces end product (whether tangible or informational). 1 yr. from now, effort still continues, but is ~~stated~~ scaled back - as it part of resources has moved to another place as ~~core~~ <sup>core</sup> to form sister agency/facility.
