Summary of Information

Site is a raised up, high, solid structure with airy components to it. A strong feeling of vertigo was encountered here. Many smooth, shiny, moving objects with rounded corners are proceeding linear at moderate speeds; the objects are colorful. A fair amount of noise is present at the site--strong suggestions that these objects are automobiles. There is a feeling of sloping up and going over something, with a companion feeling of passage underneath. The top of the structural component of the site is flat, long, hard, and smooth, with either side sloping down, except where the airiness parts are, and then the sense is clearly vertical with open space underneath the structural elements. There are places where one can "look through" the structure, and also look down from (what seems to be a long way). Impression that the site is a bridge or cross-over of some sort.
