SUMMARY OF INFORMATION

The target object is man-made, that is longer than it is high. The object is not very big, only several feet long. The exterior of the object is hard. One end is curving/rounded: extends to the underside of the object. The other end is flat and vertical. The length of the object is between these two ends. Attached to the top the object is a boxy shape (see sketch page B). The object has a bitter, metallic smell associated with it.

When the object is in use, components inside move. Nothing on the exterior of the object moves when it is in use though one can detect a vibration if one touches the surface. During use the inside parts move: recombining and changing in configuration. Metal and plastic are present inside the object.

Associated with the purpose/use of the object is the concept "closed loop."

[Epirae]

S4 1/2. Idea that object is something "used" but while
in use - inside parts recombine + change of configuration
metal + plastic inside.

S4 1/2 only thing "perceivable" from outside during use
is vibration.
