PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

5114

PROJECT NUMBER: TRAINING SESSION NUMBER: 1 OF 2

DATE OF SESSION: 01 AUG 88 DATE OF REPORT: 03 AUG 88

START: 0857 END: 0957

METHODOLOGY: CRV VIEWER IDENTIFICATION: 025

- Evaluation 2*
1. (S/NF/SK) MISSION: To access and describe the target, paying close attention to proper CRV structure. *Azola Airlines Incident*
 2. (S/NF/SK) VIEWER TASKING: 6-digit encrypted coordinates: 557862/870721.
 3. (S/NF/SK) COMMENTS:
 - a. Inclemencies: None reported.
 - b. Structure was maintained fairly well throughout the session. Several breaks were taken to discuss theory. This slowed the session down somewhat, and the session only progressed through Stage 3 within the hour of allotted time.
 - c. 025 seems to be increasingly aware of when a departure from proper structure occurs.
 - d. 025 is beginning to recognize AI, and call AI breaks.
 - e. 025 has previously had a problem getting Stage 2 impressions. This has improved in recent sessions, and continues to improve.

1 August 1988

Summary

The site is a water/land/mountain/structure interface with angles. The structures have multidimensional natural man-made components. The colors I detected were black, brown, green, blue and white (Sky) and clear or transparent. Motion is present at the site and the structures are high and wide. The site itself is large and open. See sketch on page 12. The reason the target is placed at this site is because of the natural characteristics it has to offer. The purpose is for advancement and improvement. At the end of the session, I had the feeling of flying.

Summary

The site is a water/land/structure/mountain interface. Outdoors feeling. The water has motion and there is short grass on the land. The site is somehow exhilarating. Then I focused on a structure or object that was dark, metallic, long and cylindrical which lead to the AOL breaks of cannons or tanks. The motion present is heavy, slow and progressive. Sparks of light are also present and I believe that this site involves testing zones. The natural open components of the site are necessary for this process (air and water). Environmental sciences which involves specialized chemistry. Testing for reactive results. The environmental testing processes are being done to help life and people (reduce risks). I believe this site is ecological because the water and air is affected. The natural site is important in order for the experiments to occur. The results focus is to make something better or healthier for life and people. The orange and yellow sparks going through the air convinces me that this involves advanced sciences. Microscopic misty, clear, particles are released (perhaps substances) to be tested for experimental purposes.
