

WORKING PAPER

025

19 September 1988

8804

Summary

The site is a land and structure interface. Motion and movement is present. There are a couple of high man-made buildings. In between the buildings, there is a low flat open area (parking lot) with objects on it (see sketches on pages 6A and 6B). The building on the right is made out of natural materials and has windows (page 10). The walls have metal inlay and there is a space or a gap between the inside and the outside. Security is important. On the inside of this building, there are long wide corridors with polished off-white linoleum floors. Also, there are narrow cheap doorways with rooms. The building is not new. It has been there awhile and kept clean (ADL-BK hospital). A man with black hair, dark skin, and brown eyes is wearing a baggy olive-green fatigue outfit which has a stretchy waistband.
