^{interim Summary}
 Site is a group of structures, centralized, largely low, squarish + flat, but with both tall + rounded structures present. Structures have a isolated + "surrounded" sense to them. They ~~seem~~ have an organizational, almost governmental connection. Steam, power, + electricity are ~~also~~ involved, + the site is warned by people who are experiencing a sense of nervous anticipation centering around completion/culmination of an important/dangerous ~~process~~ or experiment. Aspects of biochemical/chemical; new technology; and/or nuclear ^{related activity} seem to be involved with site. An Organic dust, small seems prevalent.
