vehicle

Site involves object (complex, mobile) made up of several complicated subsystems. During period object moved around or was moved around by people other than those normally supposed to have it. May involve vehicle similar to large missile transport: . Possibly something cylindrical raised up on top + swivel around. People who normally take care of it, & who were upset that it was gone, were a long distance away by the time the equipment was towed or used. Apparatus "directs" something in a sense different from "aiming" as one would a firearm, but directs some sort of destructive power at whatever point desired. Mechanism involve a rounded, curved very smooth, shiny, silvery, glassy component near point where "destructive power" ~~leaves~~ exits the apparatus.
