Area involves a large city with an airport and domes building nearby. Target is an open area with vegetation (trees + bushes) with an isolated structure over an open fissure. Below ground level is thick, viscous material (about 150' below surface). It has an oily or petroleum basis and is of natural materials. There is a feeling of heat rising from this material. Structure has been placed there in order to pull this material out. is over this fissure and the material.
