1. (S/NF/SK) Tasking: Monitor reviewed all available tasking (see ops officer files) prior to session. No additional instructions received.

2. (S/NF/SK) Session: Good session for this source; monitor confident that source acquired the site/target(s) to a degree which will allow for the objectification of "fine structure" (more detail) upon subsequent sessions.

3. (S/NF/SK) Summary: Land, mountainous, trees (AOL-"Peru"). Loud, wailing (siren), burnt smells and crackling sounds all associated with a type of physical experiment. What seems to be an earthen dome is present at the site. One of a series of tests takes place within this structure. It results in a localized, brilliant, red and white sphere of light which is produced suddenly; this event is preceeded by ozone smells and a sudden "pop!". People are present in the structure prior to the event. Their post-test assessment is that the test was carried out correctly. A more recent or possibly near future test takes place in the open. There is a process of "extrusion, drawing or pulling up" in connection with it. It results in a very huge, expansive, solid surface (AOL-"sphere, egg shell").

4. (S/NF/SK) Feedback: After source perceived the idea of "experiment", monitor informed him that his perception was probably correct.
