## E. SESSION SUMMARY

SG1B

terms of the name of the location. The activity includes a large ship in the area which off-loads contraband onto smaller boats, related to the main vessel, and delivers the drugs to the shore of land or an island. The drugs are in square packages wrapped in plastic and will then be transported alternatively from the target location in a north western direction. A helicopter will be involved in this scenario which monitors the transaction from above. Communications, including radio communications are at the site. Although something may occur within the next three days, April 11th is an important date to the activity.
