Interview Summary

Location #2 1st floor is in a rectangular ~~block~~ ^{structure}

w/ a few levels. Structure is ~~not~~ neutral cube, older (ca. '40's or '50's) whose purpose has changed over the years. Structure is surrounded by open area, probably grassy, & access to it is strictly restricted. Inside

are corridors & large rooms. Inside at least one room are objects, resembling functional type furniture - i.e., lab-type tables & desks. Some sort of highly complicated/technical type activity is conducted, possibly involving intricate parts. A sense of a requirement for small hand-tools & considerable manual dexterity is present. Further sense of "figuring out what something does" - the idea of assembling something, & sitting back & scrutinizing what occurs. A further sense of a sort of "reverse engineering" - where the original function or means of operation isn't known, so someone works with it - takes it apart, puts it back, & tries to see what makes it tick...
