

LTC Daniel Bauer, USAF

7/7/95
[Redacted]

SG11

Al - bricked program, wants to expand customer base. DB - takes a "try" at user's service.

Case - doing surveillance, see if guy was bad.

Tasks were in sequence - data provided, then add'l data asked for, etc - through 4 tasks. ~~This case was submitted when~~

Info was not specific - much wrong info, other info of unknown validity, don't know how to rate.

Task - gave name of suspect, is he doing anything with espionage or in, e.g., criminal activity? Where is he meeting? with who?

No data provided that helped task ^{FBI} people in their surveillance activity.

DB - fund transfers - no data provided.

Would have thought this was a predominant issue in mind of suspect - yet never cleared up in the reports.

Willing to try anything - difficult problem, need all help can get from any source. Quote successes from police use, albeit this is a different application, e.g., actual visits of para psychologist to crime scene to derive help.

If service is still provided - and

would task again - probably in cases where participants are unknown.

future was more closely identified with what is known, he would be more supportive. (2)

DB would consider having W's working directly with his analysts on specific problems, including on-site activities. But need to do on a minimal 2 or 3 year period.

Didn't receive any info he could give his people - so didn't task them. ~~DB~~ DB does not put his people in "ham-way" in any sense - not necessary in his business, worst situation is to blow surveillance activities.
