3 October 1968

MEMORANDUM FOR: Capt. Bushéy, USMC/IPWIC
INFO : Capt. Harris, USN, Chairman/IPWIC
SUBJECT : Technical Comments on PW Photo Comparisons

The following are our comments on the photographs submitted with the subject request. It should be noted that earlier comments regarding the limitations placed on comparative analysis by the poor quality of the photographs remain valid for this particular request.

Eram - No comparison is possible on the basis of the poor post-capture photograph.

Marvel - The evidence here is very limited, however, the profile view of the noses in both photographs seems very close. However the PW photograph appears to indicate a relatively full head of hair in contrast to the evident baldness in the pre-capture photograph. There is insufficient evidence for a conclusive opinion.

Miller - No comparative conclusions of value can be drawn on the basis of the photograph provided.

Mullen - There is a possibility that Mullen is the subject in #35. The hairline with its prominent recessions is similar and the skull conformation appears to be the same. The general shape of the left ear is close and there appears to be a likeness in the prominent, square chins. There also seems to be a proximity in the shape of the eyebrows. Major Mullen is a strong possibility as the PW in photograph #35.

NOT
MULLEN

Approved for Release
Date 22 NOV 1977

W. Kisucky - No comparison is possible on the basis of the photographs submitted.

Darrow - No concrete comparison is possible on the basis of photograph #38 due to the distortion of the features and lack of detail. The general physiognomy appears similar, but there is not enough detail to make a firm judgement.
