NO. OF ENCLS. (USTED BELOW)

1

DATE OF INFO.

May - September 1900 NOT CIRCULATE

SUPPLEMENT TO REPORT NO.

50-49149x

THIS IS UNEVALUATED INFORMATION:

SOURCE

second_interrogation.

- 1. During the period from Tay to September 1947 three light phenomena happening at intervals of about 15 minutes were seen almost every night between 9 and 10 p.m. local time. The phenomena were watched from the Pil camp in Pakhta Aral, about 50 km southwest of Tashkent (1101811/690151E), Uzbek S.S.R., in an east-southeasterly direction.
- 2. A darkrod ball of fire was seen first; after about six seconds it reached the apex of a long-drawn out trajectory. During this time the ball had developed a trail of fire. Its color, which was bright red at the spex point, changed in color from pale green to white, Smoke trails, noises, or detonations were not noticed.
- 3. The distance of the trajectory from the point of observation was estimated at _60 to 80 km. * The trajectory ran approximately from southwest to northeast; its length to the apex, which was from 5,000 to 12,000 meters high, was estinated at about 80 km. At the apex the ball of fire seemed about one-fifth the diameter of the full moon.
 - * Field Comment. The measurements stated with respect to the trajectory must be received with reserve. It must be considered that neither the discharge nor the noise developed by the projectile were heard. For trajectory of phenomena, see annex.
- ** 'ashington Comment: This is a reinterrogation of the informant of 50-49149x.
 - 1 Annex: One sketch showing trajectory.
