LINCOLN

HUACAR

Radio Station 20

1. LINCOLN notes (Quetzal Diario 5 March 1954) that Station 20 plans to step up its power output to 50,000 watts. The article suggests, however, that this is a long-range plan.

2. It is requested that the Station watch this development most carefully, since it could have an important bearing on HUACAR. In the event that 20 attempt to purchase equipment from HUACAR, it is recommended that ODACID take appropriate steps to delay the transaction for as long a period as possible.
